Document type	Case study
Document owner	Maram Essam (product manager)
Deliver to	Bosta
Date	25/8/2024

Problem statement:

(SOHO) sellers are struggling to efficiently manage their deliveries due to a lack of accessible, mobile-friendly tools. They need a simple, seamless way to sign up, create shipping orders, and schedule pickups without technical barriers. Bosta aims to solve this by providing a user-friendly mobile platform tailored to their needs.

Assumptions:

- Integrated Payment with Bosta, so the merchant can pay his registrations.
- We've our own Development team, design team and customer service team.
- We've a product analyst, so we can analyze our customer behavior using Mixpanel or any analytical tool.

Persona:

Name	Description	Challenges
SOHO	(Small Office Home Office)	Non-tech savvy, using mobile app only

User Story	Metrics for Success	Acceptance Criteria	Include in MVP?
------------	---------------------	---------------------	-----------------

As a SOHO seller, I want to easily sign up on Bosta using my mobile device so that I can start using the delivery services.	• Number of successful sign-ups per day • Time taken to complete sign-up process • User satisfaction rating during onboarding	• User can sign up within 2 minutes • user should enter user name, email, password, number of monthly orders, type of products and government. • Mobile sign-up process is error-free • Select the package and pay it. • Confirmation email/SMS sent upon successful registration	Yes
As a SOHO seller, I want to be able to create and manage shipping orders from my mobile device so that I can ship my products efficiently.	• Number of shipping orders created • Order completion rate • User feedback on order creation experience	• User can add the shipping weight, shipping address and pickup. • Shipment details. • Consignees details (name, email, address, mobile). • AWB should be created with ability to be downloaded as PDF. • Order management page loads within 2 seconds • Orders can be edited before pickup	Yes
As a SOHO seller, I want to be able to schedule pickups for my products from my mobile device so that they can be delivered to customers without hassle.	• Number of pickups scheduled • Pickup success rate • Reduction in missed pickups	• User can schedule a pickup with preferred time slot and location. • Confirmation is sent after scheduling • Pickup can be rescheduled if needed within 1 day	Yes
As a SOHO seller, I want to receive a tracking number for each order so that my customers can monitor the delivery status.	• Percentage of orders with tracking numbers generated • Accuracy of tracking information • Customer feedback on tracking updates	• Tracking number is automatically generated upon order creation • Tracking number is sent via SMS/Email	Yes

		Tracking status updates are accurate and timely	
As a SOHO seller, I want to track my shipments in real-time from my mobile device so that I can ensure timely delivery to my customers.	- Number of tracking updates viewed - Time spent tracking shipments - User feedback on tracking accuracy	- Real-time tracking updates are accurate. - Users receive notifications for delivery milestones	No
As a SOHO seller, I want to be notified of any delivery issues or delays so that I can communicate them to my customers promptly.	- Number of notifications sent for issues - Customer feedback on communication - Delivery issue resolution time	- Notifications are sent within 10 minutes of issue detection - Notifications include clear instructions for next steps - Issues are resolved within 24 hours	No

MVP vision:

The vision for the MVP is to enable SOHO sellers to seamlessly sign up and sign in to Bosta's platform, create shipping orders, and schedule pickups through a user-friendly mobile experience. This MVP will focus on delivering core functionality that allows users to initiate and manage their delivery needs with minimal friction.

How to measure the MVP (AARRR):

- **Acquisition:**
 - **Metric:** Number of SOHO sellers who sign up for the platform.
 - **Goal:** Achieve a significant percentage of the target market (e.g., 30% of 700K+ SOHO sellers within the first three months).
- **Activation:**
 - **Metric:** Percentage of new users who create their first shipping order within 24 hours of signing up.
 - **Goal:** 60% of users create their first order immediately after sign-up.
- **Retention:**
 - **Metric:** Percentage of users who return to the app to create a second order within a week of their first order.
 - **Goal:** Retain at least 50% of users through repeat orders in the first month.
- **Referral:**
 - **Metric:** Number of users who refer other SOHO sellers to the platform.
 - **Goal:** Achieve a 10% referral rate within the first three months.
- **Revenue:**
 - **Metric:** Average revenue per user (ARPU) generated from shipping orders.
 - **Goal:** Generate sufficient revenue from the initial user base to cover operational costs, with the potential to scale profitably

user story:

Title (sign-up)

As a SOHO seller, I want to easily sign up on Bosta using my mobile device so that I can start using the delivery services.

Acceptance criteria:

- User can sign up within 2 minutes
- user should enter user name, email, password, number of monthly orders, type of products and government.
- Mobile sign-up process is error-free
- Select the package and pay it.
- Confirmation email/SMS sent upon successful registration

Wire framing:

The wireframe is drawn on a whiteboard and includes the following elements:

- Sign UP**: The main title, underlined.
- welcome to Bosta**: A greeting message.
- User name**: Labeled next to a rectangular input field.
- Password**: Labeled next to a rectangular input field.
- Confirm Password**: Labeled next to a rectangular input field.
- # Monthly orders**: Labeled next to a rectangular input field.
- City**: Labeled next to a dropdown menu showing **Cairo** with a downward arrow.
- type of shipments**: Labeled next to a dropdown menu showing **Bulk** with a downward arrow.
- Back**: A button at the bottom left.
- finish**: A button at the bottom right.

Bonus: Risk Analysis

Risk	Description	Likelihood	Impact	Mitigation Strategy
Market Acceptance	The platform may not attract enough users, both buyers and sellers, leading to low activity and revenue	Medium	High	Conduct thorough market research before launch. Implement targeted marketing campaigns. Offer promotions and incentives to early adopters. Collect and act on user feedback.
User Trust and Security	Users may be concerned about the authenticity of antiques, payment security, and personal data protection.	High	High	Implement strict verification processes for sellers. Use secure payment gateways. Ensure compliance with data protection regulations. Provide transparency and detailed descriptions for listed items.
Technical Issues	Technical issues such as website/app downtime, slow load times, and bugs can lead to poor user experience.	Medium	High	Ensure rigorous testing before launch. Implement robust monitoring and maintenance systems. Have a dedicated technical support team to address issues

				promptly.
Competition	Strong competition from established players like eBay, Etsy, and 1stDibs may affect market share.	High	Medium	Differentiate the platform with unique features (e.g., expert authentication, high-quality listings). Focus on niche marketing. Form partnerships with antique experts and shops.
Logistics and Shipping	Challenges in safely and efficiently shipping valuable antiques can lead to customer dissatisfaction.	Medium	High	Partner with reliable shipping companies. Offer shipping insurance. Provide detailed shipping and handling guidelines to sellers.
Feature Adoption	Users may not adopt new features or services introduced on the platform.	Low	Medium	Conduct user training sessions and provide easy-to-understand tutorials. Collect user feedback to iterate and improve features. Communicate the benefits of new features effectively.
Customer Support Load	High volume of customer support inquiries can overwhelm the support team,	Low	Medium	Implement a robust FAQ and help section. Use automated support tools (chatbots).

	leading to delayed responses and dissatisfied users.		Scale the support team based on demand.

Approach:

Sum Purchases by Cohort: I'll sum up the total purchases made by users in each cohort.

Compare Totals: The cohort with the highest total purchases will be considered the most successful in selling toner.

Let's proceed with this analysis.

Answer to Question 1:

Cohort B had the highest total toner purchases with 7,072 units sold (38% of total purchases).

Cohort A followed with 6,744 units (36% of total purchases).

Cohort C had the lowest with 4,969 units (26% of total purchases).

Final Answer: Based on the data, Cohort B is the winner as it generated the most toner sales. Therefore, I would pick variant B as the most successful in selling toner.

Whoever "A" is a big competitor to "B", we cannot ignore as a big opportunity of winning if we work on it efficiently

Answer to Question 2:

The data provided includes information about phone numbers, verified emails, and the presence of first and last names across three cohorts (a, b, and c). By comparing this information with the purchasing behavior of the cohorts, we can identify patterns and propose some theories.

Data summary:

Count of has_first_name	FALSE	TRUE	Grand Total
b	85	156	241
a	138	208	346
c	142	219	361
Grand Total	365	583	948

First Names:

Cohort "a" has 208 users with first names (60% of the cohort).

Cohort "b" has 156 users with first names (65% of the cohort).

Cohort "c" has 219 users with first names (61% of the cohort).

Grand Total: 583 out of 948 users (61%) provided first names.

Count of has_last_name	FALSE	TRUE	Grand Total
c	51	310	361
a	59	287	346
b	30	211	241
Grand Total	140	808	948

Last Names:

Cohort "c" has the highest percentage of users with last names (310 out of 361, or 86%).

Cohort "a" has 287 users with last names (83%).

Cohort "b" has 211 users with last names (88%).

Grand Total: 808 out of 948 users (85%) provided last names.

Count of has_verified_email	FALSE	TRUE	Grand Total
b	10	231	241
a	180	166	346
c	251	110	361
Grand Total	441	507	948

Verified Emails:

Cohort "b" has the highest percentage of verified emails (231 out of 241, or 96%).

Cohort "c" has the lowest percentage of verified emails (110 out of 361, or 30%).

Cohort "a" is in the middle, with 166 verified emails out of 346 (48%).

Grand Total: 507 out of 948 users (53%) have verified emails.

Count of has_phone	FALSE	TRUE	Grand Total
a	233	113	346
c	275	86	361

b	169	72	241
Grand Total	677	271	948

Phone Numbers:

Cohort "b" has the highest percentage of users with phone numbers (72 out of 241, or 30%).

Cohort "a" has 113 users with phone numbers (33%).

Cohort "c" has the lowest percentage of users with phone numbers (86 out of 361, or 24%).

Grand Total: 271 out of 948 users (29%) have phone numbers.

Pattern & theory:

1- Verified email users are more engaged and committed to the platform, which could drive higher purchase rates. Email verification might be an important step in the conversion funnel..... This supports the idea that email verification is strongly correlated with purchasing behavior.

2- Collecting phone numbers could indicate stronger user intent or engagement, as users who provide this information are likely more invested in the platform. Encouraging phone number collection might increase overall engagement and lead to more purchases..... Across all cohorts, relatively few users provide phone numbers (29% overall).

Recommendation:

1- Boost Email Verification: Target cohorts, especially "c," to increase verified emails, which could enhance engagement and sales.

2- Encourage Profile Completion: Incentivize users to complete profiles (first name, last name, phone number) to foster a more personalized experience, particularly in cohort "c."

3- Target Cohort "c": Implement targeted campaigns, such as incentives for profile completion and special offers for verified users, to improve engagement and purchasing.
